

The DFGE 360-degree solution

For your participation in CDP

The mission of CDP and its supply chain program

CDP is an independent organization that annually requests information from thousands of listed companies and other organizations worldwide. With the "CDP Climate Change" questionnaire, companies are asked to provide information on their CO2 emissions as well as reduction targets and strategies. This information will then be rated and published. CDP has become a major player in sustainability assessment, and it's results are increasingly integrated into financial ratings (Deutsche Börse, Reuters, Google Finance etc. provide CDP results).

In addition, the "CDP Supply Chain Program" requests suppliers and service providers of more than 75 large companies to participate. Here, the CDP results are integrated as an important, in some cases decisive, criterion in supplier performance ratings.

Thus, more and more non-listed companies and SMEs also have to answer the complex CDP questionnaire - a task that requires a lot of know-how and internal resources.

Successful CDP participation: The turn-key solution at a fixed rate

Since 1999, DFGE works as a carbon footprint expert for small and mid-sized companies as well as for Fortune 500

corporations. As a CDP silver climate change consultancy partner we help responding companies with the completion of their CDP questionnaire from data collection to final submission.

- We work with available data and information within your corporation.
- We calculate the global corporate carbon footprint of your company according to the DFGE TopDown approach. This carbon accounting ensures a valid result within weeks.
- We deliver the final questionnaire for you to submit. Due to our experience we help you to allocate the right information in order to gain a higher rating.
- Our transparent approach provides a clear view on emission sources and reduction potentials. You control the overall project and following next steps in your sustainability strategy. The data and results of your CDP participation can be perfectly leveraged in other CSR communications.

SUBMISSION OF THE CDP RESPONSE

6-8 weeks project

Carbon accounting

Methodological approach to calculate the carbon footprint according to GHG Protocol

Reduction

High level management strategies towards emission reductions, risk management and creating new potentials

Corporate governance

In regards to climate change

Risks & chances

Management assessment for climate change related risks and chances

Transparent and valid results in 6-8 weeks

For your CDP participation

The DFGE all-inclusive package

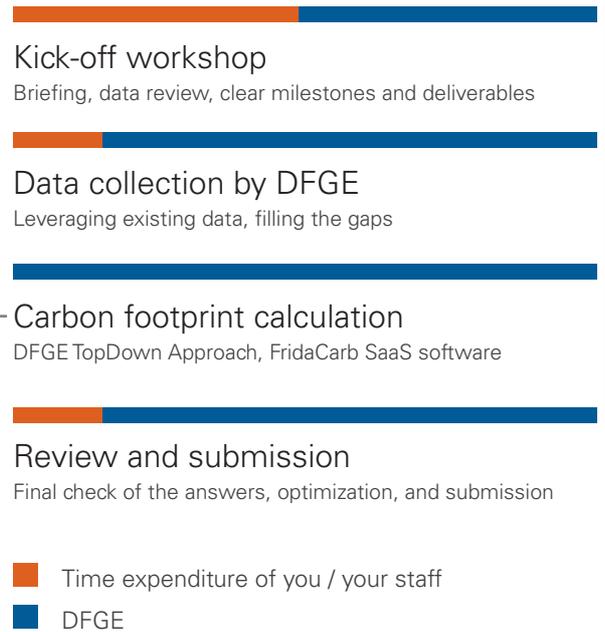

It is not our intention to block your internal resources and invade you with consultants, nor do we want to initiate multi-year projects on energy and resource management. We want to guide you quickly and reliably through the carbon footprint accounting and CDP process and as a result reduce your workload. Our CDP package is a turn-key solution which covers all relevant CDP requirements and ensures that the CDP can rate your corporation accurately based on appropriate and validated content.

CDP response check

Response check is a high level 'checking' service for CDP responding companies that have completed their CDP response. Prior to final submission to CDP, an external check can now be performed to ensure the response is as complete as possible. The Response Check service can be delivered by DFGE, who have received training from CDP on the response check methodology and process.

We also support you on any other realization or review of your internal carbon footprint calculation. E.g. to carry out a focused calculation for scope 1+2 emissions only or to analyze a certain category as logistics.

The calculation of the carbon footprint follows the DFGE TopDown Approach according to the GHG Protocol. This allows us to conduct the carbon footprint calculation within a short time frame .

Based on an overall analysis the DFGE focuses on the sensitive positions (hot spots). In an iterative-recursive process, the corporate balance and hot spot calculation is honed and the reliability increased. In every step the band width is also reduced.
