

SUSTAINABILITY INTELLIGENCE

Sustainability Intelligence is the core concept of our approach to sustainability management.

Sustainability requires facts

- You want to ensure that your sustainability communication is resilient.
- You need to reduce the internal effort required for data collection.
- You are looking for experts who can provide you with scientifically well-founded, pragmatic solutions.
- You don't need an advertising agency and don't want projects that take years to complete.

We support you in,

- what makes sense for your company as a sustainability statement.
- which standards and reportings are recommended for you at which point in time.
- how to best implement your goals for Net Zero and a climate strategy.

We look forward to learning more about your challenges.

DFGE as an institute stands for scientifically based and validated product and corporate carbon footprint calculations. As the only market participant, we maintain close partnerships with the GRI, CDP, EcoVadis and the Science-Based Targets Initiative. In addition to CSR calculations and participation in CSR reporting, we also support our clients in developing a climate strategy and a Climate Action Plan.

We bundle our DFGE solutions under the umbrella of DFGE Sustainability Intelligence, which combines all CSR activities of our customers. A new offering is the DFGE Customer Sustainability Platform, which supports companies in orchestrating their sustainability activities.

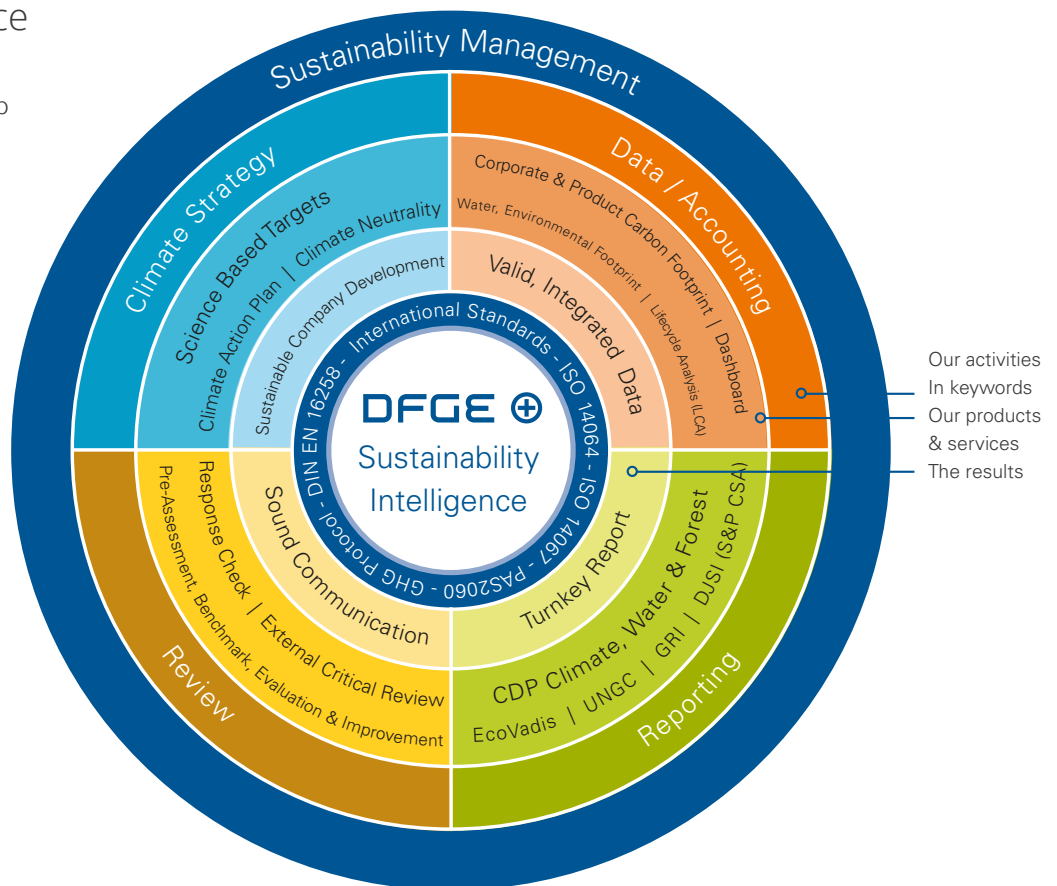

Institute for Energy, Ecology and Economy

SUSTAINABILITY INTELLIGENCE

According to international standards and with scientific process methodology.

Our services at a glance

DFGE can support you in every step of your CSR management and reporting. Our services range from data collection, calculation, review to reporting, climate action plan, climate strategy and compensation via CO2 certificates to achieve climate neutrality.

DFGE Customer Sustainability Platform

With the "DFGE Customer Sustainability Platform" we put you, the customer, in the center, because only a company-specific CSR management is truly sustainable and can lead to a climate neutrality of products or the company.

The central and intelligent hub for

- the life-cycle management of sustainability, where it lets you manage important dates for collection and submission.
- the centralized collection and storage of all relevant data in a secure environment.
- the calculations of product and/or corporate carbon footprints, which are increasingly based on SBTs and made dynamic by our intelligent automation.
- agile analysis and management of CSR activities and their impact on company-wide CO2 emissions.
- the integration of your supply chains on your DFGE Customer Sustainability Platform.
