

CDP FOREST

Become a pioneer and participate in the CDP Forest Program today!
DFGE supports you with its decades of expertise.

A sustainability reporting with growing importance

In addition to the topics of climate change and water, the issue of deforestation and logging is becoming increasingly important for companies and is becoming the focus of a wide range of stakeholders. Since 2012, CDP has therefore been using a dedicated questionnaire to ask companies about their activities as well as direct and indirect influences in this area, summarized under the term CDP Forest.

One of the world's greatest causes of deforestation and forest degradation is commercial agriculture. An estimated 10-15% of global carbon emissions result from deforestation and forest degradation. Various commodities such as soybeans, palm oil, timber and cattle are either directly or indirectly related to deforestation and forest degradation and pose potentially significant business risks and negative environmental impacts on land, water, biodiversity and climate change. As a result, more and more companies are being asked to provide information on how they manage these risks by participating in the CDP Forest program.

Since 1999, DFGE has been working as a carbon footprint and ecology expert for small and medium-sized companies as well as for Fortune 500 corporations. DFGE is a CDP silver climate change consultancy partner.

We help companies participate in the CDP programs – from climate change and water and forest, from investor to supply chain requests. Depending on your company's needs and goals of CDP participation, we provide the following dedicated service packages for the CDP Water Program:

Attend our joint webinars with CDP for season news - or book your individual online session.

- Proposal on responses/content by DFGE

Services

- Consult: Gap analysis and Workshops
- Validation of your responses with our Check before final submission to CDP
- Tailor-made consulting services

YOUR ADVANTAGES

- Being an official CDP Silver Climate Change Consultancy Partner, we know the methodology of CDP.
- Save time and effort and make use of our expertise.
- Already for several years, we support some well-known CDP participants and help them to improve their answers for a better CDP performance.
- We can help you to hold your supply chain to account, and we can support also their CDP participation.
- We take care of our customers in an integrated way – your CDP participation is just one part of CSR. Our Sustainability Intelligence solutions create transparency and synergy, no matter in which reporting initiative you participate.
- Instead of sitting on your site for months, we take a pragmatic solution-oriented approach. We see ourselves here as a coach, consultant and, above all, service provider in order to minimize the resource commitment on your side and still participate successfully in CDP.
- Also, we are not an advertising company which makes your charts look more beautiful. Originally, we come from science, and that still influences the way we work today.

Founded in 1999 as a spin-off of the technical University of Munich, the DFGE – Institute for Energy, Ecology and Economy provides consulting services in the field of sustainability. Our offer Sustainability Intelligence featuring calculation management, reporting solutions and strategy development aims at bundling the effort of taking part in several sustainability/CSR standards and rankings like CDP, UNGC, DJSI, EcoVadis or GRI as well as building overarching strategies, such as a sustainability strategy according to the SDGs. As the unique partner of the CDP for SBTs, DFGE provides its customers with comprehensive advice on climate strategy and helps them to operate climate-neutrally at product level or company-wide. To enable a future AI-based CSR management, DFGE researches in big data approach and machine learning. Our clients comprise international companies (DAX and fortune 500), SMEs, governmental organizations or territorial authorities.
